Why I think HBO-ICT programme suits me the best

1. I personally believe that ICT programm suits me, because it can teach you easiest way to find a solution to a problem. I think that this skill can be very useful in life, because it can save you from in very extreme situations, where your future can depends on you

2. And here we come to the next thing about programming. THE PASSION. Programming is not only about money, personal development and etc., but a person has to be passionate about that. If some has started programming just for the money, he is not going to go very far away

Study choice

The IT field is always spreading with high speed. There is a big list of jobs, which are wating to be fulfil with quality workers. After the big offering of working place as a reason to study ICT, then comes the work development(in meaning salary and better promoting chances). After all I believe that most of the people are working a job not only for personal fulfilment, but also for the monthly wage. Of course if you work something only because of the money. then you never going to enjoy your work. So that's why a person should find the perfect balance between money and the things, that makes him happy. Also programming is one of my passions.When I am studying it, I think that i can reveal my full potential, becace I can be fully concentrated into my study. I can spend time devemoping my programming skills knowing that every spent hour will pay off at some point. After my graduation I will be focused on finding a job related to my university education. But for now this several years in the future and can not predict how everything is going to go.

SWOT Analysis

Strengths

- Team player
- Ability to work under pressure
- Good Time management

Weaknesses

- Impatient
- Perfectionist
- Leave things for the last moment

Opportunities

- Networking
- Opportunity to test myself

Threats

- Carelessness
- Failing some exams
- High requirements

Profession

The companies, which i chose are Oracle Corporation, IBM and Rockstar Games. Let's start with the first one. Oracle Corporation is a multinational company with headquarter in Texas. They offer a big variaty of products, which they produce. The are selling database software, cloud engineering systems, enterprice software, customer relationship software and more. A person can work as a Software Engineer, AI engineer, Cloud Architect, but you more bussines oriented are also jobs like Project Manager, Bussines System Analysist and etc. Some of the technologies they use(specifically for IT jobs) are SAP, SQL, Java, PHP etc. , Oracle ADF.
